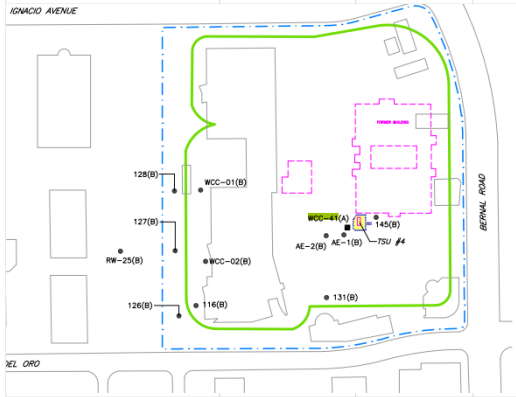
Screening Levels for Tapwater (ug/L) [1]		8000	2.8	280	0.17	18000	36	10000	410	190	11	0.49	0.019	0.46

Some notes:

The WCC-41(A) sample contained 1,1,1-TCA, 1,1-DCE, PCE, and 1,4-dioxane at the highest concentrations for this well since 2001. The concentration increases are likely due to the 30-foot rise in the water level in the well over the past two years.



[1] 在此輸 You should use the tapwater RSLs. I know that tap water and groundwater are very different, but we assume that groundwater could be a drinking water source.入
